

100 It's estimated that 100 million marine animals die from plastic waste yearly.	99 Humans are responsible for 99% of Endangered species.	98 The monarch butterfly population in North America has declined by 97% due to habitat loss and climate change.	95 African penguin populations have decreased by 96% in the last century, leading to their critical endangerment.	94 wildlife populations in tropical sub-regions of America experienced a decline of 94% over 50 years from 1970.	93 92 91 91% of the world's plastic bottles are not recycled.
81 More giant pandas live in the wild in China now than in the 80s.	82 Biodiversity in Latin America has decreased by approximately 83% since 1970.	84 85% of the world's fish stocks are overexploited, threatening marine biodiversity and sustainability.	86 Without proactive planning, renewable energy developments could displace up to 76 million acres of wildlife habitat.	87 88 89 Coral reefs are home to 25% of marine life. When exposed to marine plastic, their mortality rate increases from 4% to 89%.	83 Adaptation and resilience strategies are necessary for 90% of major cities vulnerable to rising sea levels.
79 If we utilise energy-efficient technologies and practices, we can decrease energy consumption by 80%.	77 Over 78% of the world's coral reefs are threatened by climate change and human activities.	75 There are only 75 Javan Rhinos left in the world due to hunting and habitat loss.	74 Seabird populations have declined by over 73% in the previous 60 years, highlighting the need for conservation.	72 According to studies, the population of butterfly species in the UK has decreased by 72%.	71
61 62 63 Over 63 million people have been displaced by climate-related disasters in the last decade.	65 Global plastic pollution reached 368 million metric tons in 2019, a twenty-fold increase since 1964.	66 The rate of carbon emissions is the highest they've been in 66 million years.	67 Over 350,000 whales were killed between 1904 and 1967.	68 According to reports, there was a 69% decrease in monitored wildlife populations between 1970 and 2018.	64 Deforestation has been reduced by 70% in the Atlantic Forest ⁴ of Brazil due to conservation efforts.
59 If we adopt efficient water management and conservation efforts, we can reduce water usage by 60%	58 Research shows that marine plastic was found in 59% of all whales.	56 57 species of birds in North America are identified as species of concern due to environmental challenges.	55 By 2080, climate change will increase the extinction risk of plant species by 55%.	54 53 52 Asia is the largest producer of plastic, accounting for nearly 52% of global production, with China being the largest producer.	51
41 Global electric vehicle sales rose 41% to 3.1 million in 2020.	42 43 44 The number of grizzly bears has risen by almost 600 in the past 44 years.	41 If we take conservation action, we can decrease global extinction by 45% by 2050.	40 According to estimates, there could be as many as 46,000 plastic pieces in every square mile of our oceans.	39 47 48 49 Around 480 billion plastic bottles were sold globally in 2019, which has increased significantly since then.	46 The marine vertebrate population decreased in size by 49% between 1970 and 2012.
39 40% of food produced is wasted, contributing to GHG emissions and resource depletion.	37 Every year, poachers rake more than 38 million animals from the wilds of Brazil to meet the demand for illegal wildlife pets.	36 Polyethylene accounts for approximately 36% of the total plastic production. It can last for thousands of years.	35 Over 35 billion empty plastic bottles are thrown away annually in the United States alone, contributing to plastic pollution.	34 33 32 Between 1985 and 2014, Bukit Tigapuluh, a vast area of Sumatra's forested land, lost 32% of its forest cover to deforestation.	31
21 22 23 According to reports, 20 of the warmest years on record have occurred in the last 22 years.	24 25 26 According to the IUCN Red List, 23% of mammal species are at risk of extinction.	23 24 25 26 The illegal wildlife trade is worth \$27 billion, making it one of the largest black markets in the world.	22 29 30 31 32 30% of the Earth's land area is protected to conserve biodiversity.	21	
19 Afforestation and reforestation efforts have reduced global CO2 emissions by 20%.	18 19 20 Scientists determined 2019 was one of the world's top three hottest years.	16 Antarctica lost about 2720 billion metric tons of ice from 1992 to 2017. The rate of ice loss has tripled since then.	15 Deforestation accounts for about 15% of global greenhouse gas emissions.	14 13 12 13% of litter comes from drink containers. When caps and labels are considered, the number is higher.	11
1 The world has warmed by 1 due to human activities such as gas and coal use.	4 5 6 If emissions are not significantly reduced, the sea levels will rise by 2m by the end of the century.	4 5 6 Every year, more than 3 million hectares of forest are lost, leading to climate change and biodiversity loss.	5 7 8 By 2050, an estimated 5 billion people may lack access to fresh water due to climate change.	4 9 10 Human activities and habitat destruction are causing the 6th mass extinction on Earth.	3 7 8 Over 8 million metric tons of plastic waste enter our oceans yearly, endangering marine life.
					9 10 11 Less than 9% of all plastic gets recycled.
