STARTAS

PROJECT OUTLINE

Our project uses recycled materials to combine artistry and environmental consciousness by creating a Baobab-inspired Christmas tree.

We aim to promote mindful consumerism and reduce plastic use while teaching children how to work with recycled materials.

Through hands-on exploration, they will develop a sense of resourcefulness and creativity beyond scientific knowledge.

COLLABORATION

Meet Marcus – my brother.
He is the structural engineer behind the project. His background is in sculpture, and he's made numerous life-size sculptures in the past.
He has assured me that we can build a tree two storeys high!

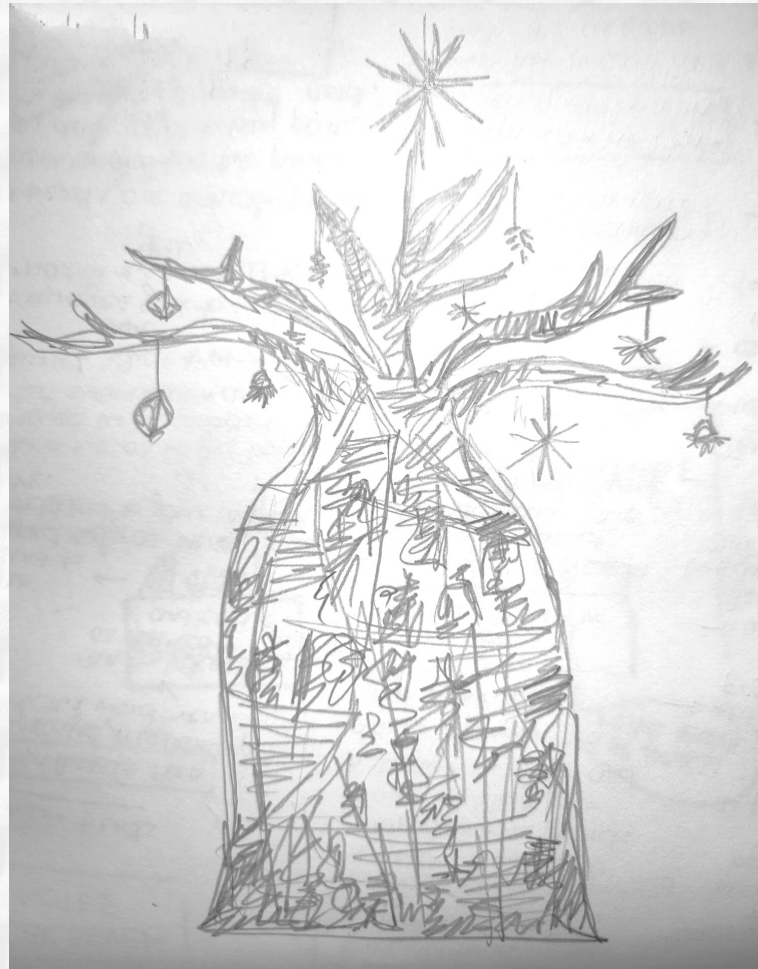

So, Where does the school fit in? And why do we want to build it at school?

THE SCHOOL

- Kids are the future planet protectors.
- They're the ones who are going to inherit our rubbish.
- It's the perfect audience to showcase plastic pollution globally.
- If we involve them in a project, they're more likely to make positive changes at home, which is our ultimate goal.
- Their imagination and creativity are amazing resources.
- The built-in audience.
- It fits in with the ethos of the school and Eco Warriors.
- Plus, there are so many more.

MATERIALS

- Cardboard
- Plastic Bottles
- Paper
- Scrunchable Plastic
- Plastic Bags
- String/Rope
- Crips Packets
- Other recyclable materials
- No tape
- No glue

RECORRATIONS

You Decide. Find some inspiration on the next page.
